PROFILE

Back-end Developer with 1.5 years of professional experience in Laravel and a total of 4.5 years in software engineering. Holds a Master's degree in Software Engineering. Passionate about building scalable applications, writing clean and maintainable code, and continuously improving technical skills.

WORK EXPERIENCES

Backend Developer

2025-03 - present

Freelance

Developed and delivered end-to-end web applications, handling both backend and frontend

- Built backend services using Laravel
- Designed responsive UIs with Bootstrap and integrated with Blade template engine
- Delivered complete solutions from planning to deployment

Software Engineer

2022-04 - 2025-03

Datall Co.

Technical & AI Research

- Conducted research and proposed AI-driven applications with technical specifications
- Analyzed existing AI solutions and evaluated potential use cases

Technical Documentation & Knowledge Management

- Authored user manuals, system guides, UML diagrams, and software specification documents
- Developed documentation templates, guidelines, and internal knowledge structures

Project & Process Coordination

- Managed Jira workflows and team coordination
- Optimized internal processes and supported Scrum-based project management

Full-stack Developer

2020-04 - 2021-03

Akointech Co.

Developed scalable web applications

- Built backend services with Laravel
- Developed dynamic frontends using Angular

EDUCATION

Master of Software Engineering

2018-09 - 2022-05

Iran University of Science and Technology (IUST)

Selected courses: data mining, complex networks, advanced database design

Thesis: Reputation assessment in Twitter using deep learning

Bachelor of Software Engineering

2013-09 - 2017-10

K. N. Toosi University of Technology (KNTU)

Selected courses: data structures, algorithm design, principles of database design

PROJECTS

Online Shop

Laravel + MySQL + Bootstrap

Developed a fully dynamic online store with Laravel framework, integrated with MySQL database and Bootstrap for the front-end. Implemented key e-commerce features: user authentication, shopping cart, order placement, product catalog, and payment gateway integration. Built an admin panel with product management, user profile management, and purchase statistics dashboard

Custom OOP-MVC Mini Framework

PHP + MySQL + Bootstrap

Created a lightweight custom MVC framework in PHP, designed with object-oriented principles (OOP). Built a blog application on top of the framework with features for authentication, post management and category display. Applied structured architecture to improve code reusability and maintainability

Blog Platform

PHP + MySQL + Bootstrap

Designed and implemented a blog application with a separate admin panel, using PHP, MySQL, and Bootstrap. Admin panel included authentication and features for creating, editing, and deleting posts. Blog frontend supported post categories, article browsing, and newsletter subscription functionality
